Administering a Patient's Unit Dose Medications

Scanning and Verifying Patient Information (cont.)

➤ If Patient Has a “Means Test” Required

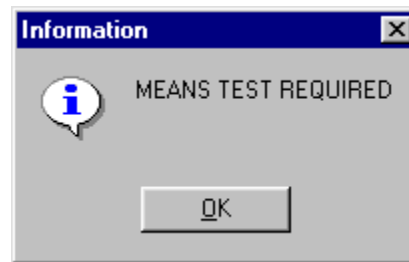

BCMA uses the standard Means Test Lookup. The following Information message displays as a reminder to a clerk to verify if a current “Means Test” exists for this patient (veteran). This financial information is updated/reviewed on an annual basis.

To Review Means Test Information:

- 1 Review the Information message, and then click **OK** to return to the patient's VDL and begin administering active medications to the patient.

Keyboard Only Users: Press **TAB** to activate the OK button, and then press **ENTER** to display the patient's VDL.

Example: Means Test Information Message

- 2 Continue with the medication administration process.

Administering a Patient's Unit Dose Medications

Scanning and Verifying Patient Information (cont.)

TIP:

The Patient Transfer Notification message will only display **once** per Medication Tab (i.e. Unit Dose or IVP/IVPB), while the patient's record is open.

➤ If Patient Transfer Notification Message Displays

BCMA displays the Patient Transfer Notification message if the patient has had a movement type (usually a transfer) within the site-definable parameter, and the last action for the medication occurred before the movement, but still within the defined timeframe. You can define this parameter, the Patient Transfer Notification Timeframe, on the BCMA Site Parameters Tab of the BCMA GUI Site Parameters application.

Note: The display of the message is dependent on the last action displayed in the "Last Action" column of the VDL. BCMA evaluates the last action performed each time the Unit Dose or IVP/IVPB Medication Tabs are refreshed.

To Review Patient Transfer Notification Message:

- 1 Review the Patient Transfer Notification message, and then click **OK** to return to the patient's VDL and begin administering active medications to the patient. BCMA will determine each last action that falls within the site-specified Notification "window" and display the patient's movement in the "Last Action" column, along with the existing last action.

Keyboard Only Users: Press **TAB** to activate the OK button, and then press **ENTER** to display the patient's VDL.

Example: Patient Transfer Notification Message

- 2 Continue with the medication administration process.

Administering a Patient's Unit Dose Medications

Preparing to Administer Unit Dose Medications

TIP:

If the number of medications that need to be administered is greater than the VDL can display, use the Scroll Bar to view all of them.

The instructions listed in this section describe how to change the Virtual Due List Parameters (Start and Stop Date/Time) and Schedule Types on the patient's VDL, along with the process for scanning the patient's active Unit Dose medications.

Viewing a Patient's Active Unit Dose Medications

The “view” or active window shown below, displays the *first* time that you open BCMA and display medications under the Unit Dose Medication Tab.

Each time that you open a VDL (i.e., patient record), BCMA defaults to the Unit Dose Medication Tab and all four Schedule Types already selected. This occurs even if you change the Schedule Types or Medication Tab during an administration session.

Note: The Unit Dose Medication Tab provides an “alert light” which turns **GREEN** *only* when the patient has active medication orders associated to them. When you click a “lit” Tab, BCMA displays the patient's active medication orders on the VDL — for the selected timeframe only. This safeguard is provided, along with the Missed Medications Report, to ensure that all Unit Dose medications that are due are given to the patient in the correct dosage and on time.

Example: BCMA VDL for Active Unit Dose Medications

TIP:

Each time you open a patient record, BCMA defaults to the Unit Dose Medication Tab and displays medication orders under this Tab.

The screenshot shows the 'Bar Code Medication Administration' window. The 'Unit Dose' tab is selected. The patient information section displays: MONTANA, JOHNNY (MALE), SSN = 500-60-1000, DOB = 1/1/1949 (54), Height = 5', Weight = 77.27kg, Location = 7A GEN MED 722-D. The 'Virtual Due List Parameters' section shows Start Time: 02/07@1000 and Stop Time: 02/07@1200. The 'Schedule Types' section has checkboxes for Continuous, Q12H, PRN, and One-Time, all of which are checked. The 'ALLERGIES' section shows 'no allergy assessment' and 'ADR: No ADRs on file'. The 'Active Medication' table lists two medications: ACETAMINOPHEN TAB (325MG, Q4H, PO) and MILK OF MAGNESIA SUSP (16 OZ, Q12H, PO). The 'Scanner Status' is 'Ready' and the 'Scan Medication Bar Code' field is empty. The bottom status bar shows the user 'HONEYCUTT, DAVID', the location 'ALBANY', and the server time '2/7/2003 11:02'.

Stat...	Ver	Hsm	Type	Active Medication	Dosage	Route	Admin Time	Last Action
G	xxx		C	ACETAMINOPHEN TAB	325MG, Q4H	PO	02/07@1000	GIVEN: 2/7/2003@1102
G	xxx		C	MILK OF MAGNESIA SUSP	16 OZ, Q12H	PO	02/07@1000	GIVEN: 2/7/2003@1100 TRANSFER

Administering a Patient's Unit Dose Medications

Preparing to Administer Unit Dose Medications (cont.)

TIP:

The Start and Stop Time Parameters are set to the "Default Times from NOW" settings in the GUI BCMA Site Parameters application.

TIP:

You can expand (or restrict) the number of active Unit Dose medications, that display on the VDL, by changing the default Start and Stop Times in the Virtual Due List Parameters area.

Changing the Virtual Due List Parameters

The Virtual Due List Parameters is the functional timeframe during which you can administer medications to a patient before or after the scheduled administration time. For many medical centers, this timeframe is defined as two hours.

Once you use BCMA, these Parameters become your default settings. For example, when you change the default settings for certain fields (i.e., Start and Stop Times, and Column Sort Selection) on the VDL, these settings are retained in your user parameters and become the default settings each time you log on to BCMA. You can reset these user-selected parameters to site-defined parameters using the *Reset User Parameters* [PSB USER PARAM RESET] option in CHUI BCMA.

Note: The VDL Start and Stop Times display in one-hour increments, from the top of the nearest hour. For example, 1:15 displays as 1:00 and 1:45 displays as 2:00. You can expand the time range 12 hours before and 12 hours after NOW.

To Change the Virtual Due List Parameters:

- 1 In the patient's VDL, select the Start and Stop Times in the Virtual Due List Parameters area. The VDL automatically refreshes and displays active medications for the newly selected administration window.

Keyboard Only Users: Press **TAB** to access the Virtual Due List Parameters area and to move among the Time fields.

Example: Virtual Due List Parameters Area on VDL

Hist	Allergies	CPRS Med Order
Virtual Due List Parameters:		
Start Time:		Stop Time:
03/19@1200		03/19@1400

- 2 Now you are ready to select the Schedule Types of Unit Dose medications that you want to display on the VDL.

Administering a Patient's Unit Dose Medications

Scanning and Verifying Medication Information (cont.)

➤ If No Order Exists for Medication Scanned

The Error message, provided below, displays if the patient does *not* have an order for the medication that you just scanned.

To Review the Error Message:

- 1 Review the Error message, and then click **OK** to return to the patient's VDL.

Keyboard Only Users: Press **TAB** to activate the OK button, and then press **ENTER** to return to the patient's VDL.

Example: Error Message When No Order Exists for Medication Scanned

- 2 Continue administering active Unit Dose medications to the patient.

Administering a Patient's Unit Dose Medications

Administering a Multiple Dose Order

TIP:

Scanning twice for a two-tablet dose helps to document the actual dosage given to the patient at the time the medication is scanned.

TIP:

The Multiple Doses dialog box closes *automatically* if you are scanning the last dosage for the medication. This is dependent on the Schedule Type selected on the VDL.

The Multiple Dose dialog box, provided below, displays when the patient's order includes a **single** dispensed drug with multiple doses (variable doses) that need to be administered to the patient. The Multiple Dose dialog box, on the next page, displays when the patient has **multiple** dispensed drugs that need to be administered to them. You can add comments about the medication administration process to either dialog box.

To Administer a Multiple Dose Order:

- 1 Scan **each** dosage or dispensed drug for the medication that you want to administer to the patient.

Example: Multiple Dose Dialog Box

Multiple Dose

Active Medication: **THIORIDAZINE TAB**

Special Instructions/Information:

Dosage: 30MG Units per Dose: 3

☒ THIORIDAZINE 10MG TABS
☐ THIORIDAZINE 10MG TABS
☐ THIORIDAZINE 10MG TABS

Enter a Comment (Optional): (150 Characters Maximum)

Scanner Status: **Ready**

Scan Bar Code:

Done Cancel

— OR —
(See Next Page)

Administering a Patient's Unit Dose Medications

Administering a Multiple Dose Order (cont.)

TIP:

The Multiple Dose dialog box displays the dosage and units per dose for orders that contain only one dispensed drug. However, orders that contain more than one dispensed drug will display the heading "****Multiple Dispensed Drugs:" instead.

To Administer a Multiple Dose Order: (cont.)

Example: Multiple Dose Dialog Box

Multiple Dose

Active Medication: **THIORIDAZINE TAB**

Special Instructions/Information:

****Multiple Dispensed Drugs:

- ☒ THIORIDAZINE 100MG TAB
- ☐ THIORIDAZINE 25MG

Enter a Comment (Optional): (150 Characters Maximum)

Scanner Status: **Ready**

Scan Bar Code:

Done **Cancel**

- 2 Click **DONE** after you scan all multiple dosages or multiple dispensed drugs needed. BCMA processes the information, and then displays the letter "G" (for "Given") in the Status column to document that you administered the medication to the patient.
- 3 Continue administering active Unit Dose medications to the patient.

Keyboard Only Users: Press **TAB** to activate the DONE button, and then press **ENTER** to display the patient's VDL.

Administering a Patient's Unit Dose Medications

Administering a Fractional Dose Order

TIP:

This functionality is also available on the IVP/IVPB Medication Tab.

TIP:

The Fractional Dose dialog box lets you document the administration of fractional unit doses that are *less than* 1.0.

The Fractional Dose functionality is designed to alert you when dispensed drug dosages need to be administered to a patient in “fractional” doses, and to allow you to provide comments about this order type once administered. In short, the related dialog boxes let you document the units and the fractional portion of a dose administered to a patient.

Note: The Fractional Dose dialog box displays when the units per dose is fractional and *less than* 1.0. The Multiple/Fractional Dose dialog box displays when the units per dose is *greater than* 1.0. If you do not scan once for each unit listed in the Multiple/Fractional Dose dialog box, the Confirmation dialog box displays, requesting that you confirm the actual total units administered to the patient.

To Administer a Fractional Dose Order:

- 1 Scan the medication that you want to administer to the patient.

Note: The dialog box that displays depends on the amount of the fractional dose (i.e., less than or greater than 1.0) to be administered to the patient. Both dialog boxes no longer provide the Close button on the Title Bar.

Example: Fractional Dose Dialog Box

Fractional Dose

Active Medication: **THIORIDAZINE TAB**

Special Instructions/Information:

Dosage: 5MG Units per Dose: 0.5

Enter a Comment (Optional): (150 Characters Maximum)

Scanner Status: **Not Ready** Scan Bar Code:

— OR —
(See Next Page)

Administering a Patient's Unit Dose Medications

Administering a Fractional Dose Order (cont.)

TIP:

The Multiple/Fractional Dose dialog box lets you document the administration of fractional unit doses that are *greater than 1.0*.

To Administer a Fractional Dose Order: (cont.)

Example: Multiple/Fractional Dose Dialog Box

- 2 Perform one of the following actions, which are related to the fractional dose administered to the patient.
 - If the fractional dose is *less than 1.0*, enter any comments about the administration (if desired), and then click **DONE**. BCMA then processes the information, and displays the letter “G” (for “Given”) in the Status column to document that you administered the medication to the patient.
 - If the fractional dose is *greater than 1.0*, scan all units that you’re administering to the patient, enter any comments about the administration (if desired), and then click **DONE**. If all units are scanned, BCMA then processes the information, and displays the letter “G” (for “Given”) in the Status column to document that you administered the medication to the patient.
 - If you did not scan once for each unit listed in the **Multiple/Fractional Dose dialog box**, the Confirmation dialog box displays. Proceed to step #3.

Keyboard Only Users: Press **TAB** to activate the **DONE** button, and then press **ENTER** to display the patient’s VDL.

Administering a Patient's Unit Dose Medications

Administering a Fractional Dose Order (cont.)

TIP:

The Confirmation dialog box displays if you do *not* scan once for each unit listed in the Multiple/Fractional Dose dialog box.

To Administer a Fractional Dose Order: (cont.)

Example: Confirmation Dialog Box

Confirmation

Warning

Dispensed Drug:
THIORIDAZINE 10MG TABS

Units per dose: **2.5**

You did not scan all of the units for this dispensed drug. Click the BACK button to scan additional units.

Back

-- OR --

Click the PARTIAL button to confirm the number of units that have been scanned.

Partial

- 3 At the Confirmation dialog box, perform one of the following actions, which are related to the fractional dose administered to the patient.
 - Click **BACK** to scan additional units, if you did not scan all of the units for this dispensed drug. The Multiple/Fractional Dose dialog box re-displays, retaining the data entered before you clicked the **DONE** button. If the fractional dose is greater than 1.0, perform step #2 again.
 - Click the **PARTIAL** button to confirm the number of units that have been scanned. The Confirmation dialog box expands for you to select the number of units that have been scanned. Proceed to step #4.

Administering a Patient's Unit Dose Medications

Administering a Fractional Dose Order (cont.)

TIP:

The Confirmation dialog box expands when you click the **PARTIAL** button, allowing you to select the number of units scanned that will be recorded in BCMA.

To Administer a Fractional Dose Order: (cont.)

Example: Confirmation Dialog Box (Expanded)

Confirmation

Warning

Dispensed Drug:
THIORIDAZINE 10MG TABS

Units per dose: **2.5**

You did not scan all of the units for this dispensed drug. Click the **BACK** button to scan additional units.

-- OR --

Click the **PARTIAL** button to confirm the number of units that have been scanned.

Select the number of units scanned that will be recorded in BCMA:

☒ 1.5 ☐ 2.0

- 4 Select the number of units scanned that will be recorded in BCMA.

Note: Since BCMA cannot determine if one of the units scanned was the fractional unit (i.e., the split tablet), the following choices are provided in the example above, where only two scans were performed.

- Selecting 1.5 indicates that 1.5 units were administered to the patient.
 - Selecting 2.0 indicates that 2.0 units were administered to the patient.
- 5 Click **OK** after making your selection. BCMA then processes the information, records the number of units selected, and displays the letter “G” (for “Given”) in the Status column to document that you administered the medication to the patient.
 - 6 Continue administering active medications to the patient.

Administering a Patient's Unit Dose Medications

Administering an Order with Multiple Admin Times

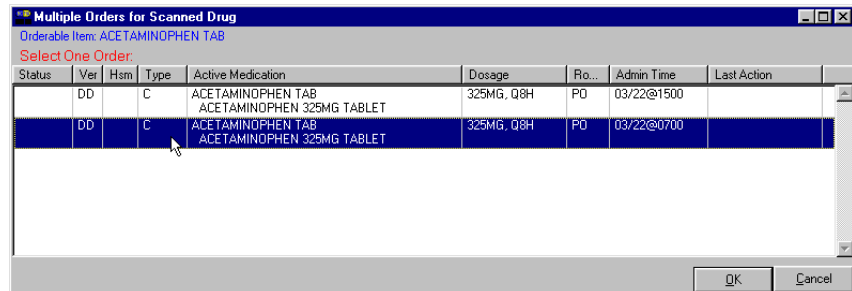

The Multiple Orders for Scanned Drug dialog box, provided below, displays *only* if the patient's order has multiple administration times for the medication that you scanned.

To Administer an Order with Multiple Administration Times:

- 1 Select (highlight) the order containing the administration time that you need, and then click **OK**. BCMA processes the information, and then displays the letter "G" (for "Given") in the Status column to document that you administered the medication to the patient.

Keyboard Only Users: Use the **ARROW** keys to select (highlight) an order. Press **TAB** to activate the OK button, and then press **ENTER** to accept the selection and display the patient's VDL.

Example: Multiple Orders for Scanned Drug Dialog Box

- 2 Continue administering active Unit Dose medications to the patient.
